Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Specification

1. The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Wu.

Art Unit: 2621

Wu discloses a video encoding method with support for editing when scene changed (Wu: figures 3-5), the distance between two reference pictures being defined as M in a GOP, the method comprising the steps of: capturing pictures in a display order (Wu: column 4, lines 1-10); detecting the scene change for a picture PIC_n (Wu: column 5, lines 40-50); and coding the pictures in a coding order when there is not a scene change occurred, and coding the pictures by a special processing when there is a scene change occurred (Wu: column 6, lines 1-24); the special processing comprising: executing a first and a third coding stages when the picture PIC_{n-1} is not a reference picture (Wu: column 8, lines 10-25); and executing a second and the third coding stages when the picture PIC_n is a reference picture (Wu: column 10, lines 15-21); wherein the first coding stage is to re-code the picture PIC_{n-1} as a P-picture (Wu: column 10, Tables A-B), the second coding stage is to code the B-pictures preceding the picture PIC_{n-1} , and the third coding stage is to start a new GOP, to code a picture PIC_{n+M-1} as a I-picture (Wu: column 10, lines 1-5), and to code the pictures PIC_n to PIC_{n+M-2} as B-pictures with only referencing to the picture PIC_{n+M-1} (Wu: column 11, Tables C-D), as in claim 1.

Regarding claim 2, Wu discloses wherein the first coding stage finishes coding the B-pictures if there are B-pictures preceding a previous reference picture (Wu: column 7, lines 15-30), as in the claim.

Regarding claim 3, Wu discloses wherein the first coding stage codes the B-pictures if there are B-pictures preceding the picture PIC_{n-1} (Wu: column 4, lines 25-45), as in the claim.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hurst discloses an information stream syntax for indicating the presence of a splice point. Linzer discloses a compressed video editor with transition buffer matcher. Saunders discloses a signal processor. Yasuda discloses a decoding device and method for deciding the next decoded frame based on the frame interval.
